PROFILE

Senior full-stack engineer (~4.5 years) who ships end to end — React 19 / Next.js + TypeScript on the front, real .NET / PostgreSQL on the back, plus platform work (CI/CD, testing, observability). I work **AI-native**: Claude Code, LLM agents and MCP are part of how I ship, and I authored my team’s **shared AI-engineering conventions**. At a smart-building SaaS I **owned frontend delivery** and sustained it **solo for ~8 months**, and in my final stretch took over **cross-department delivery coordination previously held by the CTO**. Trilingual (Spanish native, French bilingual, English professional), remote-first, with a humanities background I bring to communication and product judgment.

SKILLS

AI & agentic dev	Claude Code (power user), LLM agents (Claude, GPT/Codex), MCP, AI-assisted code review, team AI conventions (CLAUDE.md + shared skills)
Frontend	React 19, Next.js (App Router), TypeScript, TanStack Query, React Hook Form, Zod, Zustand, Tailwind CSS, Radix UI
Backend & platform	.NET (C#), EF Core, Node.js, PostgreSQL, REST APIs; CI/CD (GitHub Actions), Vercel, Sentry, Amplitude, Playwright, Vitest
Also	Go, Svelte / SvelteKit, React Native / Expo, Python / Flask, Figma (UX/UI)
Languages	Spanish (native) · French (bilingual) · English (professional)

EXPERIENCE

DEBOS — Full-Stack Engineer Oct 2024 — Aug 2026 · Remote

Joined via ARATECH (Oct 2024); permanent Mar 2025. Progressed Junior → Senior. Smart-building management platform.

- Owned frontend delivery — sustained it solo for ~8 months during the lead’s absence: three large features to production, zero critical reverts.
- In the final stretch, owned the tech department’s delivery — enforcing deadlines across every team, unblocking each one and keeping communication flowing — a coordination function the CTO had held and handed to me to focus on product; recognized as the team’s delivery benchmark.
- Built 6+ product modules end to end (climate, energy, water, blinds, access control, org keys) and a full-stack device search (React UI + a .NET endpoint + PostgreSQL trigram indexes).
- Drove cross-cutting architectural refactors (barrel-file removal, route groups, cross-module alignment) adopted as team conventions; created the design system and type-safe i18n across the app.
- Built the end-to-end test suite (Playwright) from a dormant setup — auth/teardown, credential isolation, a production-safety guard, manual-QA automation — and added feature flags (Amplitude) + observability (Sentry).
- Authored the team’s shared AI-engineering conventions (CLAUDE.md + versioned code-review skills) and ran an AI-augmented workflow (Claude Code, agents, MCP), raising quality across the whole frontend.

Nivimu — Frontend Developer Apr 2023 — Apr 2024 · Remote

Large-scale HR PWA startup.

- Owned features end to end with high individual responsibility — code review, branch self-approval, QA/UX.

- Led the **JavaScript** → **TypeScript** migration and built an internal **component library, design system and micro-frontends** (Bit); stack: React, TanStack Query, Ant Design, Redux / Saga, Emotion, Sentry.

Earlier — Frontend & Full-Stack

2021 – 2023

- **Attlos** (TypeScript / React, first professional TS role); freelance: **Íntegro** (company site end to end, React / Node) and **Memorizame** (sole frontend, Svelte / Supabase).

EDUCATION

- Full-Stack Software Development — Bootcamp**
4Geeks Academy · 2021–2022
- Philosophy & Psychology — university coursework**
Univ. Complutense de Madrid · UNED
- French-language schooling**
Lycée Français International de Palma

SELECTED PROJECTS

- MiniDebos**
Self-built .NET backend clone to deepen backend skills
- Personal CV web**
Go · Templ · HTMX · Tailwind CSS
